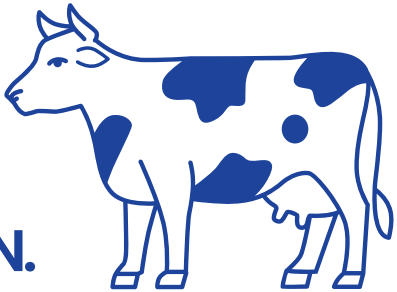
Maximise your feed dollar with Vistacell and SureDose

What is Vistacell?

Vistacell is a live yeast derived from Saccharomyces cerevisiae. Its outer shell is used to protect the inner core of live yeast cells, ensuring the delivery of the maximum amount of activity to the rumen.

Vistacell competes for sugars and scavenges for oxygen to reduce the number of lactic acid producing organisms in the rumen. This allows for the stabilization of rumen pH and an increase in the number of fibre digesting organisms.

VISTACELL IMPROVES RUMEN EFFICIENCY, LEADING TO BETTER DIGESTIBILITY AND INCREASED PRODUCTION.



Farmers who have used Vistacell report:

- Cows can break down fibrous feed more efficiently.
- Increased production and profitability.
- More settled cows, due to the reduced risk of subacute rumen acidosis.
- Higher BW scores and overall improved cow condition.

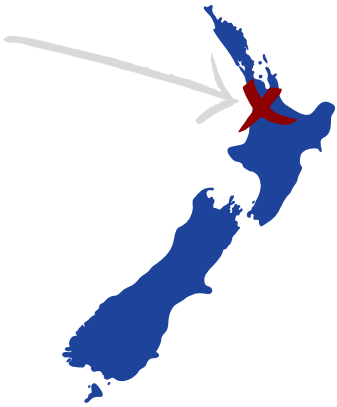
Maximise your feed dollar with Vistacell and SureDose

TO ENSURE THE RIGHT AMOUNT OF VISTACELL TO EVERY COW, TRY OUR PATENTED SUREDOSE DELIVERY SYSTEM FREE FOR SIX WEEKS.

With this offer, you'll get the SureDose unit at no cost, including installation, and six weeks of Vistacell, with volumes based on your herd size.

Devised in NZ, SureDose prevents live yeast being damaged by heat or chemical reaction and prevents herd behavioural dominance that can limit the intake of live yeast in smaller cows.

SureDose ensures the delivery of the exact amount of active Vistacell to every cow, every time.



If you've been wondering how this system will work for you, lock in a trial now to find out.

Simply phone Peter Maxton, on 027 274 6834, or enquire through our website rci.com.au/suredose
