COLLOVET™

Potassium Glycerophosphate 24.0 g/L, Ammonium Iron (III) Citrate 23 g/L, Sodium Glycerophosphate 21.8 g/L Caffeine Citrate 12.0 g/L, Manganese (II) Sulphate 2.2 g/L, Thiamine Hydrochloride 0.2 g/L

A restorative and appetite stimulant

Hard conditioning of performance animals usually induces a condition of mental as well as physical stress. Stress indicators normally include:

1. Weight loss;
2. Poor muscle development;
3. Slow recovery after competition or racing;
4. Becoming 'picky' eaters or off feed;
5. Gastric ulceration;
6. Fatigue;
7. Increased incidence of errors in jumping, dressage and competitive events.

COLLOVET is most useful but not limited to when animals are suffering from the conditions above. It may also assist in increasing mental alertness and capacity for muscular work.

5 way action method

1. **Stimulates appetite**
2. **Improves nervous "tone" in animals undergoing training. Schooling or racing**
3. **Improves capacity for muscular work**
4. **Conditions animals for show or sale and promotes a healthy bloom to the coat**
5. **Keeps animals eating and keeps them growing. Especially helpful where animals are off feed and for racing horses**

Directions for use:

Use each day for a minimum of 5-10 days depending on level of response required. Administer 30 mL per 100 kg live weight per day.

If used in performance animals, the regulations of the relevant authorities regarding medication should be observed.
